

August 07, 2020

Dear Landowner,

We reached out to you back in August of 2019 regarding the mandated upgrades to line 879. The upgrades are necessary to ensure that the safe and reliable distribution of power is maintained and, therefore, will enhance the integrity of the entire transmission system in your local area.

The project, located in the towns of Plattsburgh, Peru and Au Sable, include but are not limited to Hammond Lane, Route 22, Arizona Avenue, S Junction Road, Bear Swamp Road, and Old State Road, as well as the streets in between and in the vicinity of these areas. Construction has been going on since September. During our most recent phase of construction we have located underground utilities within the right of way (ROW) on both sides of the transmission line paralleling Arizona Ave. As a result of this discovery, the success of the project requires a routing shift of the transmission line for the 5 structures that parallel the roadway up to New York Electric and Gas (NYSEG) Arizona Avenue Substation. This shift will move westerly 15' of the existing structures, moving us past these underground facilities. While we are in this area of the ROW you may notice some vegetation clearing. This is required to maintain electrical clearances to the conductors

NYSEG's core value is to provide safe and reliable energy for our customers. Our company prioritizes being a good neighbor and will work collaboratively with landowners, community leaders and regulators throughout this upgrade process.

If you have any questions regarding this letter or the project, please call us at 833-551-4300 and reference the Line 879 project. We look forward to working on this important initiative on behalf of our customers.
