Or call 911

 **NYSEG · RG&E**
Part of the Avangrid family

For your safety, we've added a distinctive sulfur-like odor, similar to rotten eggs, to help you and your family identify a natural gas leak.

If you smell that distinctive odor, don't wait!

Get up, get out and call us or **911** immediately from a safe location.

How to recognize a leak:

Smell

We added a harmless chemical called mercaptan to natural gas. It smells like rotten eggs.

Sight

You may see a white cloud, mist, fog, blowing dust, or bubbles in standing water.

Sound

You may hear an unusual noise like roaring, hissing or whistling.

If you suspect a leak:

Get up, get out and call us or **911** immediately. Do not use your telephone or cell phone in your home.

Provide your exact location with cross streets.

Do not smoke, light candles or operate electrical switches or appliances. Doing so can produce a spark and cause an explosion.

Let us know if sewer construction or digging activities are going on in the area.

Do not assume someone else will report the odor.

Natural gas has an excellent safety record, but like all forms of energy, it must be handled properly. If improperly handled, it may cause a hazardous condition such as a fire, explosion or asphyxiation.

We work diligently to ensure pipeline safety through a variety of measures including:

- Design and construction practices
- Inspection, monitoring, testing, and notification systems and programs
- Workforce training and qualification
- Public education programs

Safe digging starts here:

Damage to a natural gas pipeline from excavation activities may cause a natural gas leak and hazardous situation.

Before beginning any excavation, have all underground utilities marked by using the online form at UDigNY.org or calling **811**. **It's free. It's easy. And it's the law.**
